Saturday 15th May - International Astronomy Day

International Astronomy Day is celebrated twice a year, close to the first quarter moon of spring and fall — on May 15 and October 9, this year.

A famous example of astronomy was Mayan astronomy. They were avid observers of the sky, keeping recordings and producing calendars and star charts. To them, the actions of the gods could be read in the movement of the stars, moon, and sun.

Did you know, ancient people in Britain created great structures made of stone to, as it is believed, track celestial bodies — Stonehenge is probably the most famous example.

Friday 21st May - National Endangered Species Day

This is a day to consider the dwindling populations of certain animals and work together to help. Environmental conservation didn't gain traction until the mid-1800s.

Did you know, the Dodo went extinct in 1662?

One of the ways you can observe National Endangered Species Day is to take time to see for yourself what the natural world looks like, right in your backyard. See if you can spot all the creatures that make their homes with you, and try to figure out the best way to help your local ecosystem work.
